Problem: An at-large membership which works on actual policy input would cannibalize the existing organizations' staff. Wanted solution: Formally dissolve GAC and make them part of an ALC.

ICANN Structure:

- GAC
- SecComm
- Board
- CEO
- ASO
- PIR
- "DNSO"
- At-large Memberships

- Board as manager of consensus process that continues, to happen in SOs.
- SO councils elect board members
- ALC elects board members
- ALC elects reps to SO councils, where these reps have a vote on policy, but not on board jobs.
- ALC as some kind of a rep - 6A, 2012, own board representation
- TLDs to be managed by RIAF, lead by elected representatives
- Funding from all SOs?
